Introduction

The high-performance Keysight Technologies J-BERT M8020A enables fast and accurate receiver characterization of single and multi-lane devices running up to 16 or 32 Gb/s.

With today's highest level of integration, the M8020A streamlines your test setup. In addition, automated in-situ calibration of signal conditions ensures accurate and repeatable measurements. And, through interactive link training, it can behave like your DUT's link partner. All in all, the J-BERT M8020A will accelerate insight into your design.

Key features:

- Data rates up to 8.5 and 16 Gb/s expandable to 32 Gb/s
- 1 to 4 BERT channels in a 5-slot AXIe chassis
- Integrated and calibrated jitter injection: RJ, PJ1, PJ2, SJ, BUJ, sinusoidal level interference (common-mode and differential-mode), SSC (triangular and arbitrary, residual) and Clock/2
- 8 tap de-emphasis, positive and negative
- Integrated and adjustable ISI
- Interactive link training for PCI Express 8 GT/s and 16 GT/s
- Interactive link training for USB 3.0 and USB 3.1
- DUT RX / BERT TX equalizer negotiation for 10GBASE-KR
- Built-in clock recovery and equalization
- All options and modules are upgradeable

Applications:

The J-BERT M8020A is designed for R&D and test engineers who characterize and verify compliance of chips, devices, boards and systems with serial I/O ports up to 16 Gb/s and 32 Gb/s in the consumer, computer, mobile computing, datacenter and communications industry.

The J-BERT M8020A can be used to test popular serial bus standards, such as PCI Express®, SATA/SAS, DisplayPort, USB Super Speed, MIPI® M-PHY®, SD UHS-II, Fibre Channel, QPI, memory buses , backplanes, repeaters, active optical cables, Thunderbolt, 10/40 GbE/SFP+/QSFP, 100GbE/CFP2.

M8000 Series of BER Test Solutions

Simplified time-efficient testing is essential when you are developing next-generation computer, consumer, or communication devices.

The Keysight M8000 Series is a highly integrated BER test solution for physical layer characterization, validation, and compliance testing.

With support for a wide range of data rates and standards, the M8000 Series provides accurate, reliable results that accelerate your insight into the performance margins of high-speed digital devices.

Shift into high gear with the M8000 Series and take the design verification express lane.

J-BERT M8020A high-performance BERT

Enabling fast, accurate receiver characterization of single- and multi-lane devices running up to 16 or 32 Gb/s.

Highest level of integration for streamlined test setups

With J-BERT M8020A all receiver (RX) test capabilities are built-in: jitter sources, common and differential-mode level interference, and de-emphasis to emulate the transmitter (TX) of the device under test (DUT). In addition M8020A provides a built-in reference clock multiplier for synchronization of the BERT pattern generator with the DUT's reference clock which can carry spread spectrum clocking (SSC). On the analyzer side, a built-in equalizer re-opens closed eyes and a clock recovery with adjustable loop bandwidth enables repeatable BER measurements.

With this high level of integration a receiver test set-up with M8020A is now much easier to connect and more robust. Set up and debug time is shortened, calibration is simpler and the frequency of recalibration is lower, resulting in more efficient use of overall test time.

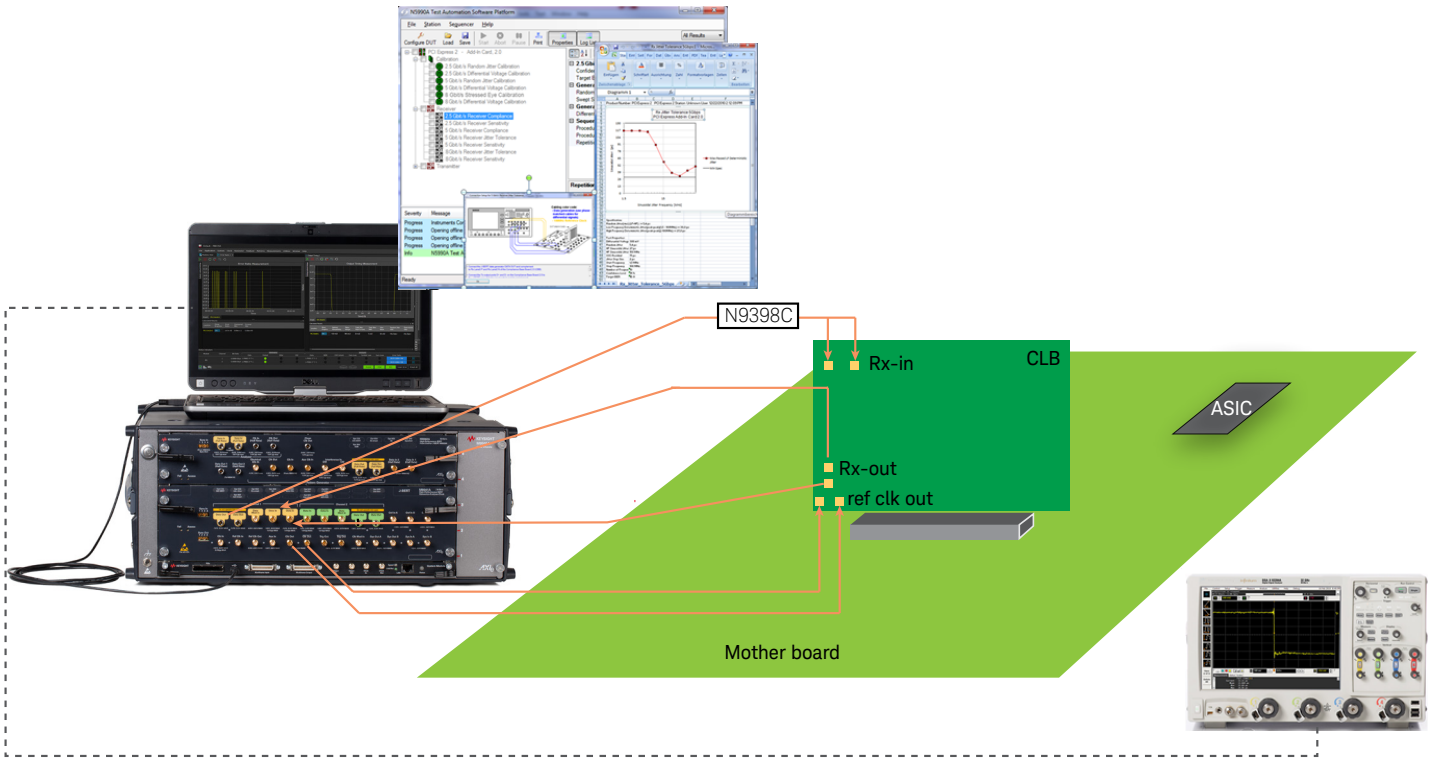

Figure 2. J-BERT M8020A streamlines complex receiver test setups. The example shows a PCIe 3 (8 GT/s) mother board RX test (CEM spec) with J-BERT M8020A connected via a compliance load board (CLB). J-BERT M8020A provides built-in de-emphasis, jitter sources, common-mode and differential mode interference (CMI, DMI), reference clock multiplier, clock recovery and continuous time linear equalizer (CTLE) – everything that is needed is built-in and calibrated.

Interactive link training to fasten loopback

The ever increasing data rate of computer buses and datacom interfaces results in shrinking margins and the necessity to use equalization techniques in transmitters and receivers to compensate for the lossy channels caused by inexpensive PC board material or long cables. For the latest industry standards, such as PCI Express 3 or 4, SAS 12G, and backplanes such as 100GBASE-KR4, the link partners are required to optimize the TX de-emphasis and RX equalization combination. The RX takes the active part during this procedure. In order to do so, the BERT must be capable to understand the low level protocol and to react accordingly, i.e. change its TX de-emphasis as requested. J-BERT M8020A can behave like a real link partner with its interactive link training capability. Currently supported are PCI Express in common reference clock architecture for 8 GT/s and 16 GT/s as well as USB 3.0 and USB 3.1.

J-BERT M8020A can act on TX equalization change requests from 10GBASE-KR, 25GBASE-KR and 100GBASE-KR4 device under tests, if timeouts can be disabled and the device under test's link training status state machine can be forced to bypass states preceding the TX equalization training. Support of 25GBASE-KR and 100GBASE-KR4 requires J-BERT M8020A configuration for 32 Gb/s.

See "pattern, sequencer and interactive link training" section for respective options.

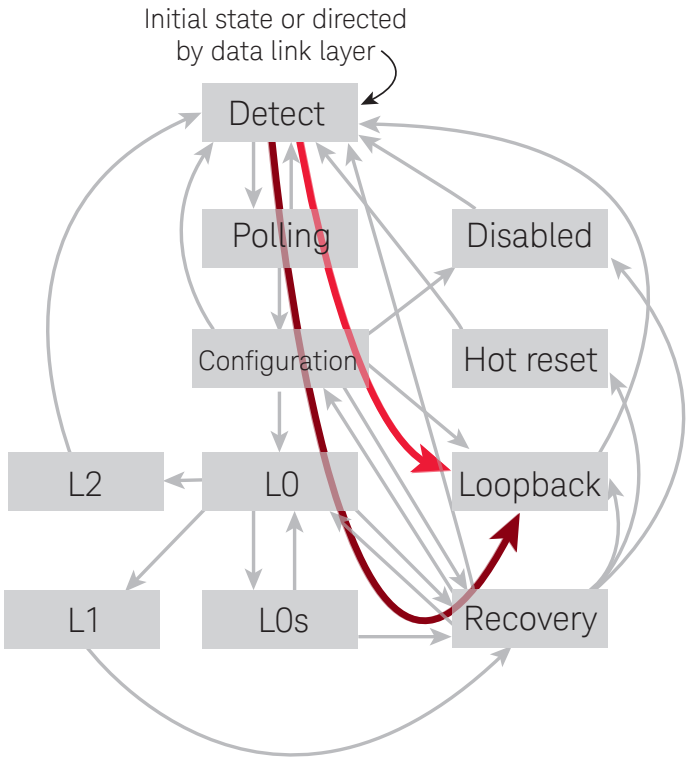

Figure 3. J-BERT M8020A can behave like a real link partner. Due to its interactive link training capability it is able to train the device into the loopback state via recovery state, as shown in this example for PCIe.

Overview J-BERT M8020A High-performance BERT

Figure 5. J-BERT M8020A high-performance BERT for accelerated receiver characterization. The configuration shows a 4 channel 16 Gb/s BERT in a 5-slot AXIe chassis consisting of one M8041A module with two BERT channels and clock synthesizer and one M8051A extender module with two additional BERT channels.

Receiver characterization and compliance test

Most multi-gigabit digital interfaces define a receiver tolerance test where the receiver must detect the incoming data bits properly while a certain amount of stress is applied. J-BERT M8020A provides calibrated and built-in jitter sources and automated jitter tolerance measurements. Users can define the modulation frequency range, the number of frequency steps, the min. and max. applied jitter, BER and confidence level and relax time. Results can be exported.

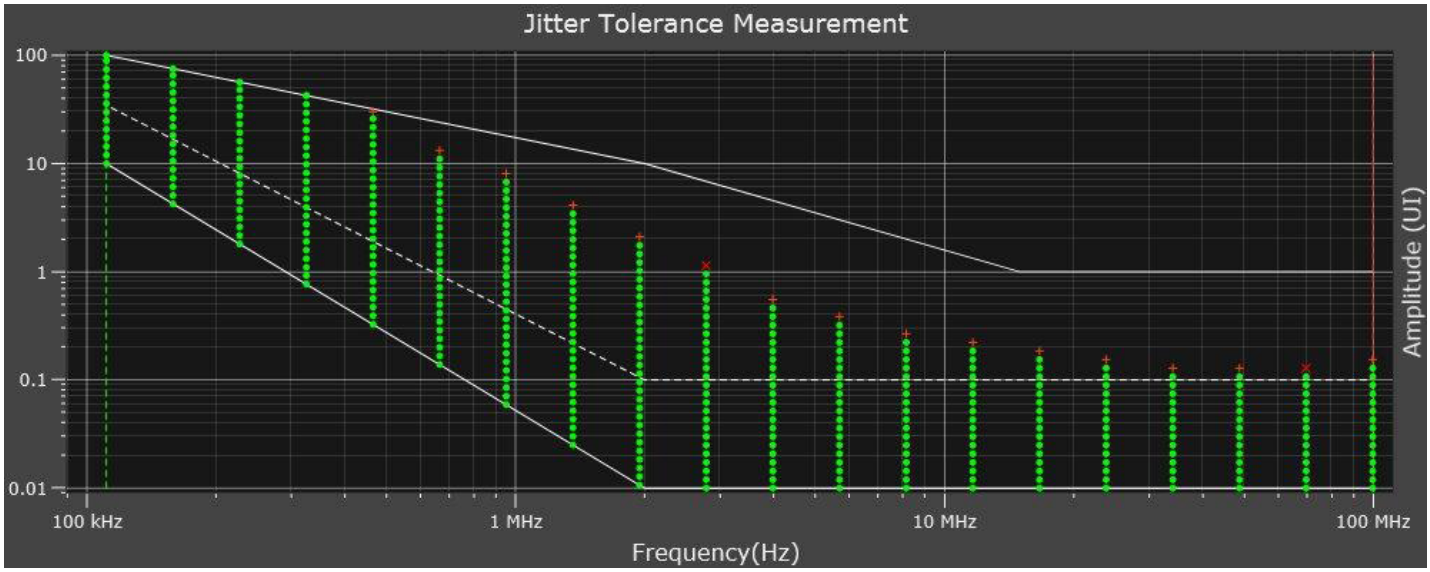

Figure 6. J-BERT M8020A provides automated jitter tolerance characterization and compliance measurements. A library of Jitter tolerance templates is available. To optimize test time, customized jitter tolerance templates can be created with a graphical jitter tolerance template editor. The red dots in the result screen show where the BER level was exceeded, the green dots show where the DUT tolerated the received jitter.

Emulate de-emphasis and compensate for channel loss

Most serial interfaces that operate above 5 Gb/s use transmitters with de-emphasis to compensate for electrical signal degradations caused by printed circuit boards or cables between the transmitter and the receiver ports. R&D and test engineers who need to characterize receiver ports under realistic and worst case conditions require a pattern generator that allows to accurately emulate transmitter de-emphasis and the channel with adjustable 8-tap de-emphasis levels.

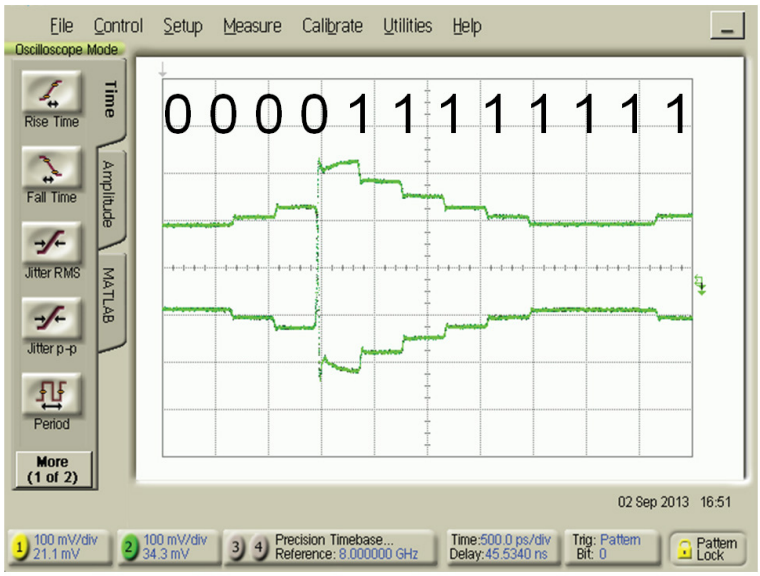

Figure 7. J-BERT M8020A provides built-in de-emphasis with up to 8 taps to emulate a transmitter de-emphasis and to compensate for channel loss. The example shows a bit sequence of eight “0“s and eight "1"s with two pre-cursors and 5 post-cursors that can be adjusted individually.

Emulate channel loss with integrated and adjustable ISI

With increasing data rates the channel loss between transmitter and receiver in digital designs becomes more and more important. The loss is caused by printed circuit board traces, connectors and cables in the signal path. This channel loss results in intersymbol interference (ISI) that depends on the channel material and dimensions, the data rate and the bit pattern. All high-speed digital receivers are specified to tolerate a certain amount of loss or ISI. J-BERT M8020A provides integrated and adjustable ISI to emulate channel loss on all channels during receiver characterization.

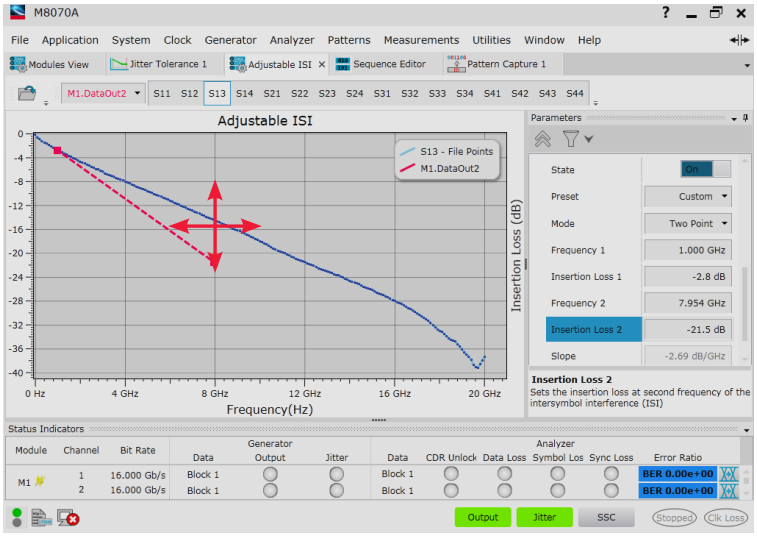

Figure 8. J-BERT M8020A offers integrated and adjustable ISI to emulate channel loss. ISI can be controlled for each channel independently via a graphical user interface. Frequency and loss points can be set. S-parameter files can be imported. The example shows a loss curve in blue for the imported S21 parameters for the 12.8 “ trace of M8048A. The red line shows the loss parameter entry for M8020A.

J-BERT M8020A configuration for 32 Gb/s

The J-BERT M8020A can be configured as a full 32 Gb/s BERT for accurate receiver characterization. It provides built-in jitter sources, up to 8-tap de-emphasis, and a clock recovery for full-sampling BER and jitter tolerance measurements up to 32 Gb/s. One common user interface allows controlling all parameters of the 32 Gb/s pattern generator and analyzer.

Key features of the 32 Gb/s BERT configuration:

- Excellent intrinsic jitter performance
- Calibrated jitter sources up to 1 UI eye closure for HF jitter, multi-UI LF jitter, BUJ and Clk/2 jitter
- No step increase when turning on jitter sources
- Built-in adjustable ISI (only with M8062A)
- 8 tap de-emphasis with positive and negative cursors
- Superposition of level interference avoids external adders
- Clock recovery with adjustable loop bandwidth (built-in only with M8062A, N4877A is needed for setups with M8061A mux)
- Built-in Analyzer CTLE (only with M8062A)
- Interactive TX equalizer negotiation between DUT RX and BERT TX for 25GBASE-KR and 100GBASE-KR4 (only with M8062A)
- Add-on to 16 Gb/s BERT configuration
- Common user interface

Figure 9. The J-BERT M8020A can be configured as a complete 32 Gb/s BERT for accurate receiver characterization. The M8062A 32Gb/s front-end provides a pattern generator with de-emphasis and ISI injection and analyzer CDR and CTLE.

User interface and measurements

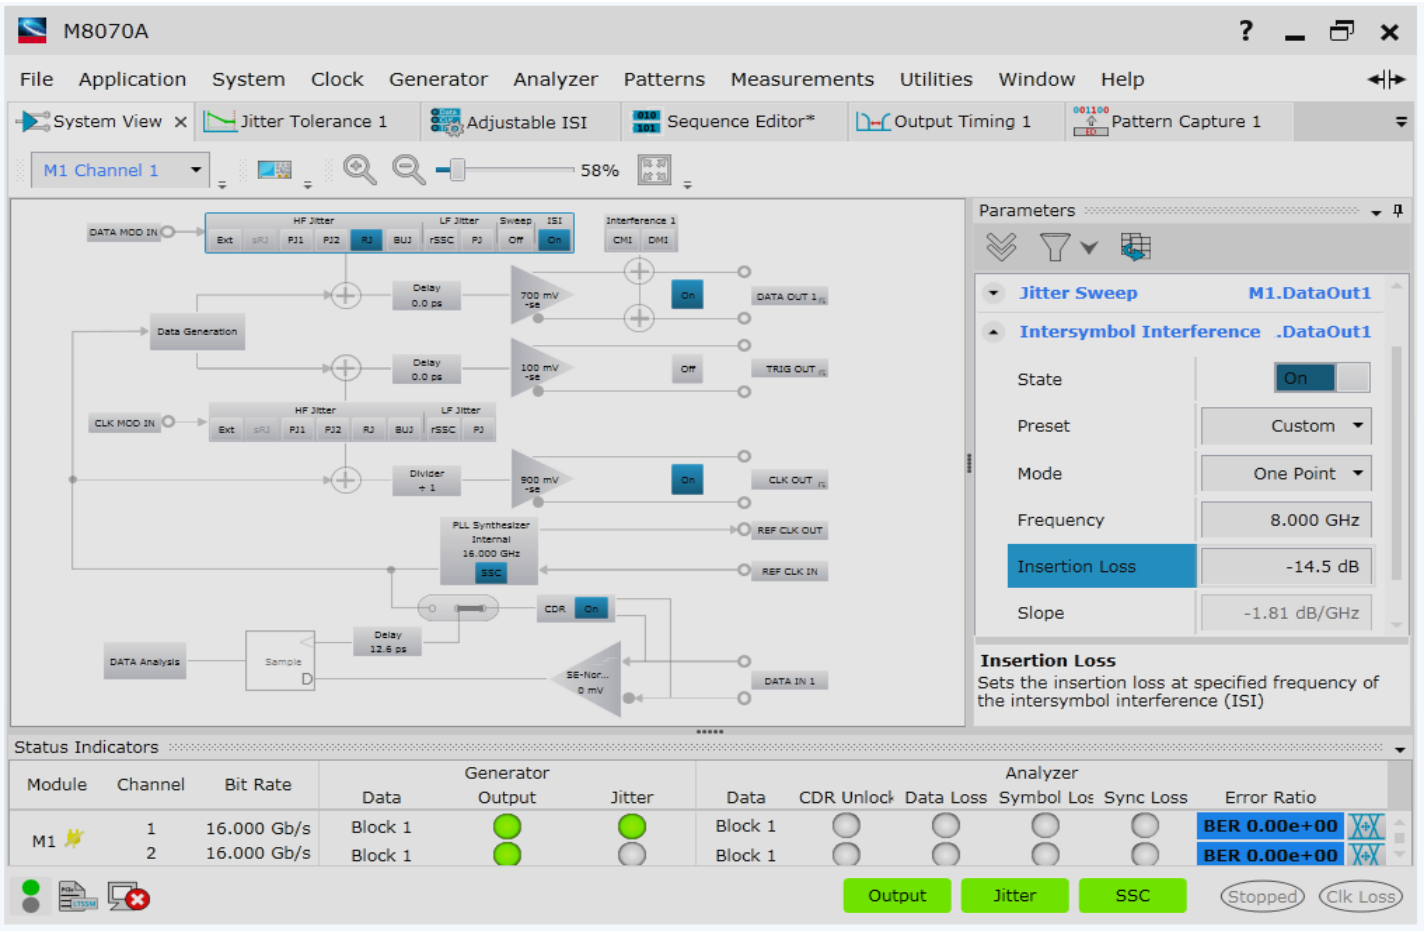

Figure 10. The graphical user interface for J-BERT M8020A offers multiple views that can be defined by the user. This example shows the system view on left side and the pattern generator data output parameters at the right.

The multi-channel BERT offers pattern generation and analysis of up to 10 channels in parallel. All impairments can be added to the data signal on each channel individually.

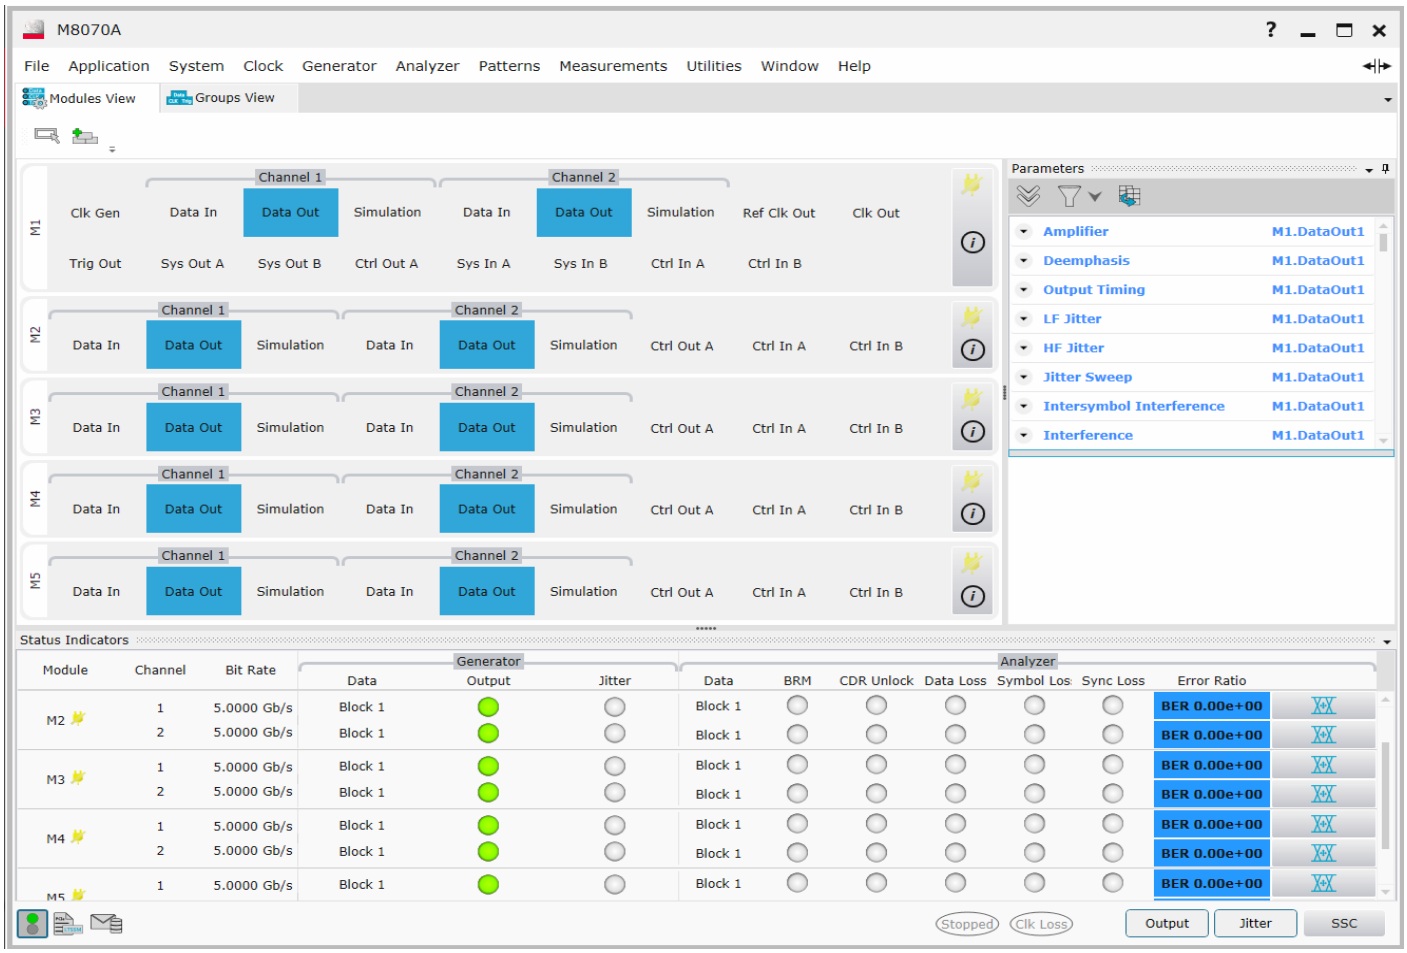

Figure 11. Multiple M8030A ten channel module view

Eye diagram measurements are important to get a fast overview on the signal quality of the signal at the input of the Analyzer. This can be either the direct output of a transmitter or a distorted signal at the end of a cable or trace. Many signal parameters like rise/fall times, eye height and eye width, as just a few examples, are provided with this measurement tool.

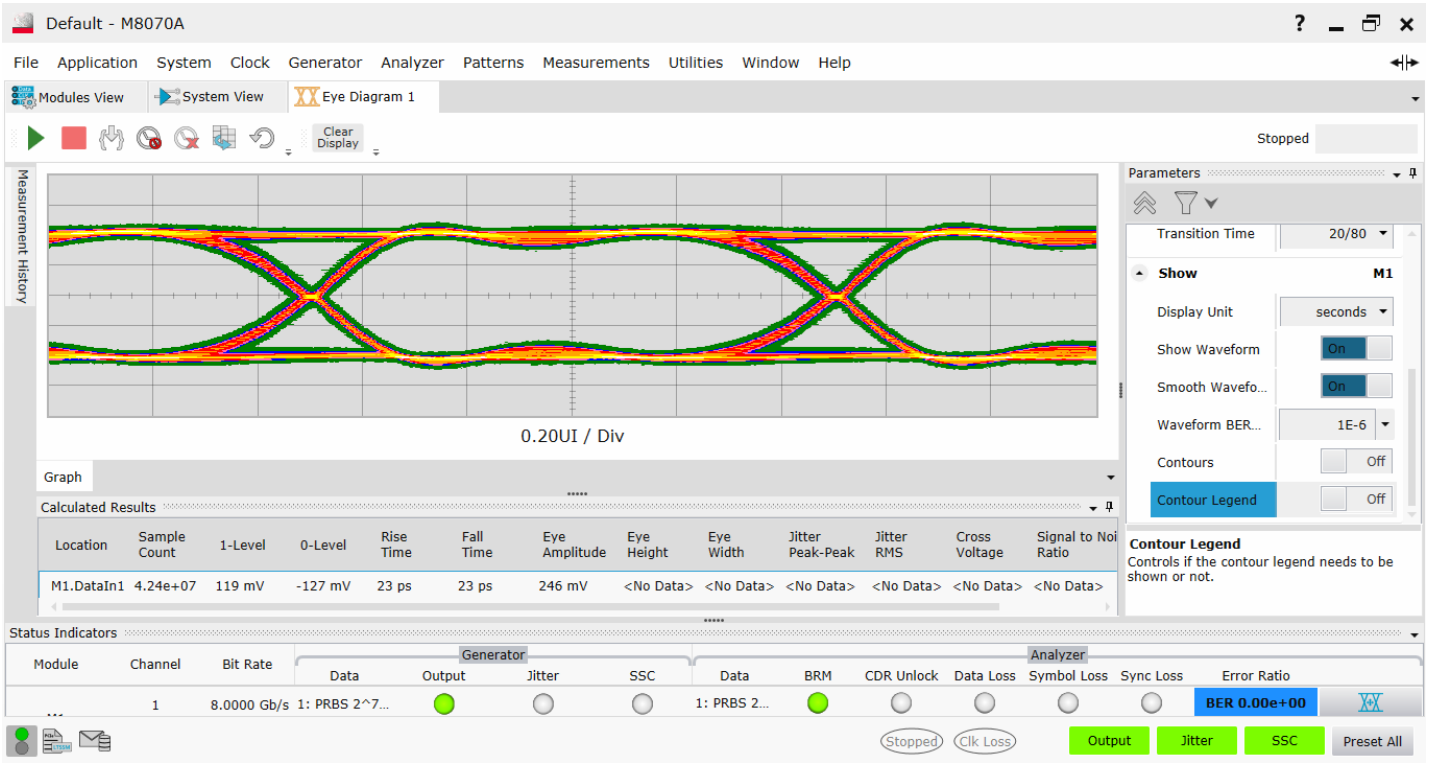

Figure 12. Eye diagam measurement with J-BERT M8020A Analyzer

Pattern sequencer, coding and interactive link training

To simplify test pattern creation, J-BERT M8020A provides unique tools such as an interactive link training status state machine, pattern sequencer with break and branch conditions, a real-time scrambler for coded patterns, masking, symbol filtering for meaningful BER measurements for retimed loop back, a library of pre-defined patterns and loop-back sequences, and a graphical pattern editor.

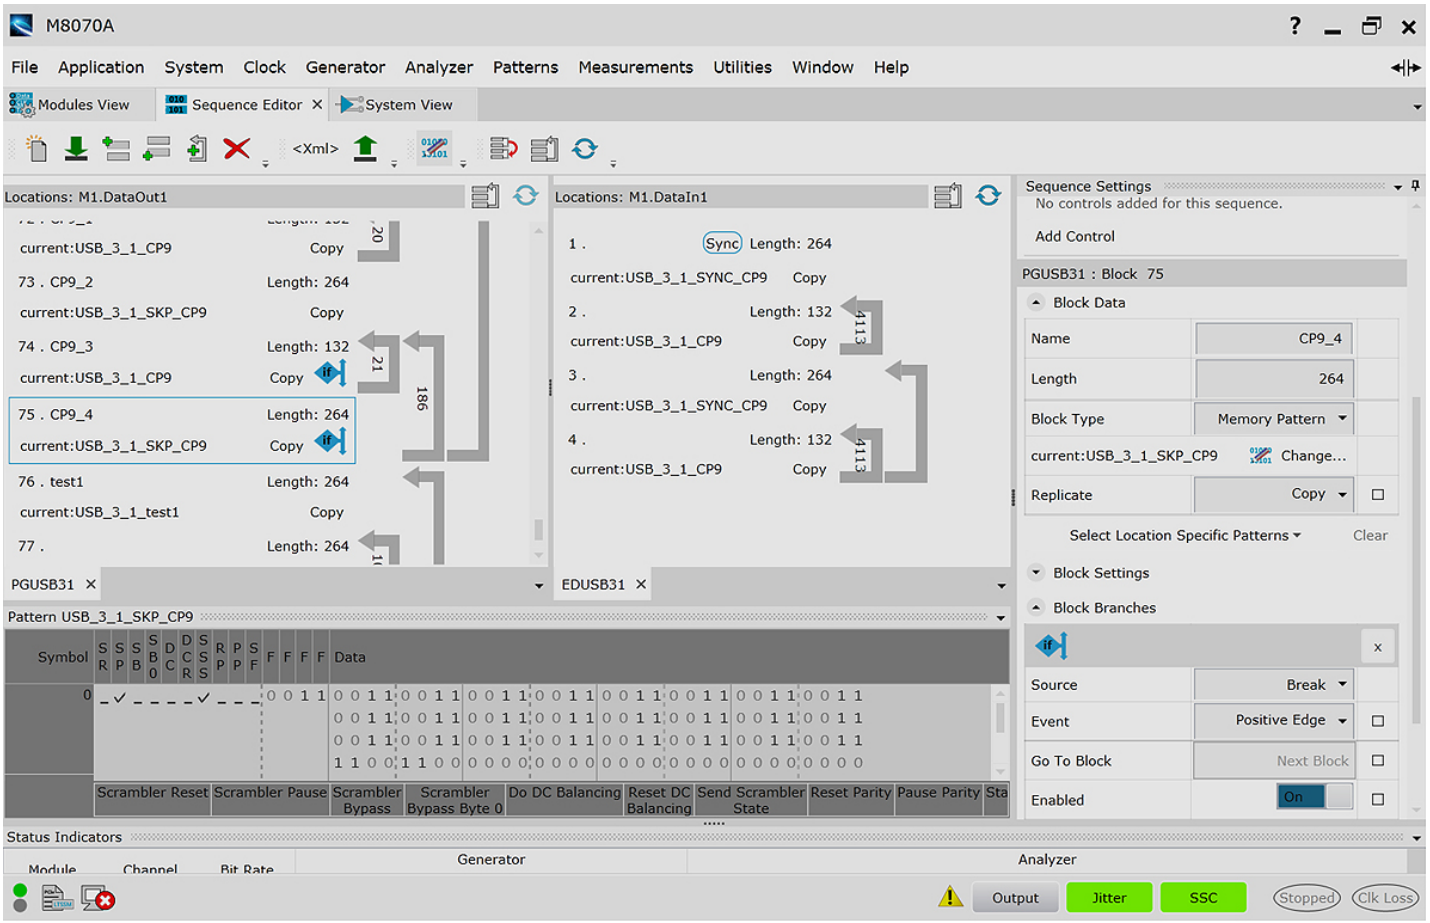

Figure 13. The J-BERT M8020A provides powerful pattern sequencing capabilities. For each pattern generator and analyzer channel a pattern sequence with multiple loop levels, breaks and block controls can be defined. A library of link training sequences for popular standards is available. The example shows a USB 3.1 link training sequence.

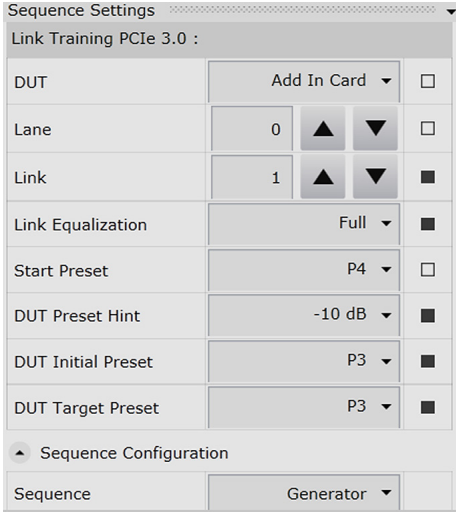

Figure 14. The interactive link training capability of J-BERT M8020A significantly reduces the effort to generate and tune a loopback sequence for your device under test. The example shows the properties you can choose for the PCIe 8 GT/s or 16 GT/s link training state machine.

Data output (DATA OUT 1, DATA OUT 2)

Table 1. Data output characteristics for M8041A and M8051A.

All timing parameters are measured @ 0.5 V into ground		**M8041A**	**M8051A**
Data rate	256 Mb/s to 8.50 Gb/s (option G08 or C08), 256 Mb/s to 16.20 Gb/s (option G16 or C16)	x	x
Data format	NRZ		
Channels per module	1 or 2 (second channel requires option 0G2)		
Amplitude	50 mV to 1.2 Vpp single ended, 100 mV to 2.4 Vpp differential, 1 mV resolution; addresses LVDS, CML, low-voltage CMOS, others. See table 2 for max. output amplitude in presence of CMI or DMI		
Amplitude accuracy	5 % ± 5 mV typical (AC)[3]		
Output voltage window	–1 V to +3.0 V		
External termination voltage	–1 V to +3.0 V. For offset > 1.3 V the termination voltage should be ± 0.5 V of offset		
Transition time	Steep: 12 ps typical (20%-80%) [6] Moderate: 17 ps typical (20%-80%) Smooth: 20 ps typical (20%-80%)		
Crossing point	Adjustable from 30% to 70%		
Intrinsic total jitter [1]	8 ps p-p typical		
Intrinsic random jitter [2]	300 fs rms typical		
Data delay range	0 to 10 ns, resolution 100 fs		
Data delay accuracy	±1% ±20 mUI typical [5]		
Deskew accuracy	±10 ps typical between data out 1 and 2 of the same module		
Electrical idle transition time	Output transitions from full swing signal to 0 V amplitude and vice versa at constant offset within 4 ns typical. Electrical idle can be controlled from sequencer. Latency depends on selected coding (symbol width): Binary (1 bit) ±64 UI ± jitter amplitude /2 8B/10B (10 bit) ±80 UI ± jitter amplitude /2 128B/130B (130 bit) ±130 UI ± jitter amplitude /2 128B/132B (132 bit) ±132 UI ± jitter amplitude /2		
Skew between normal and complement output	3 ps maximum at front panel, 8 ps maximum at the end of the recommended cable pair (M8041A-801)		
Termination impedance range	To protect the output stage, the output is disabled when an unexpected voltage or termination impedance is detected. DC output coupling mode: Termination range for devices connected to data out: – Unbalanced 50 Ω +15 Ω /-10 Ω – Typical balanced 100 Ω ± 30 Ω typical Operation into open is possible for these ranges when “DC coupled“ and “balanced“ termination modes are selected: – output amplitude max. 300 mV [4] – offset 0 to 370 mV AC coupling mode: When using the AC coupled mode you must apply an external DC blocking capacitor is expected. The external DC resistance must be greater than or equal to 300 Ω, with the HF resistance being ~50 Ω (single-ended) or ~100 Ω (differential).		
Termination modes	Balanced/unbalanced DC/AC coupling		
Connectors	3.5 mm, female

1. When terminated with 50 Ω into GND. Doubles into open.

Delay of SYS IN and CTRL IN to the data outputs in UI = block length [UI] + X ± LFPJ [UI] * 0.5 ± SSC deviation [UI]

The SSC deviation can be calculated as:
down spread SSC deviation = (data rate * (deviation in %/100)) / (8*SSC modulation frequency)
center spread SSC deviation = (data rate * (deviation in %/100)) / (4*SSC modulation frequency)

Figure 19. This table shows typical values for X in unit intervals (UI) in order to calculate the delay between SYS Input and CTRL input to the data outputs of M8041A and M8051A. The X depends on data rate and the selected coding (symbol width).

Jitter tolerance specifications

M8020A provides built-in calibrated jitter sources designed to cover receiver test needs for most of the popular multi-gigabit standards such as: PCIe, USB, MIPI, SATA, DisplayPort, CPU frontside buses, CEI, 10GbE, 100GbE, SFP+, QSFP, CFP2/4, etc. M8020A provides automated jitter tolerance measurements. A library of pre-defined compliance curves is provided.

For 32 Gb/s setups using M8061A, the jitter sources of M8041A/51A can be used. The M8061A multiplexer and M8062A 32 Gb/s front-end are transparent to jitter.

Table 13. Specifications for low frequency periodic jitter (requires option 0G3 advanced jitter sources).

ISI channels

External ISI channels are available to emulate channel loss. Keysight offers dedicated compliant ISI channels for DisplayPort, PCIe3 (base spec) and SATA. M8048A is offered in addition. For detailed specifications see M8048A data sheet.

M8048A-001 ISI Channels provides four short traces:
7.7”(196 mm), 9.4” (240 mm), 11.12 “(282 mm), 12.8”(324 mm)
M8048A-002 ISI Channels provides four long traces:
14.4” (366 mm), 16.1” (408 mm), 24.4” (620 mm), 34.4”(874 mm)

Level interference injection

Common mode and differential mode level interference can be generated internally to test common mode rejection of a receiver and vertical eye closure tolerance. Simultaneous injection of CMI and DMI is possible. In 32 Gb/s configurations with M8061A, external sources for M8061A are required. See M8061A data sheet for details on built-in level interference superposition and gain adjust parameters.

Specifications analyzer (error detector)

Each M8041A/51A analyzer channel includes a clock recovery.
For the following functions a separate module option is required:

- Equalizer CTLE option (option 0A3 for M8041A and M8051A)
- SER/FER analysis (option 0S2 is offered for M8041A only, but applies for all analyzers channels in the same clock group): this option provides handling of 8B/10B coded, 128B/130B coded and 128B/132B coded patterns. 8B/10B coded patterns support automatic handling of running disparity changes, scrambling/descrambling and up to 4 filler primitives consisting of up to 4 symbols each. No dead time while filtering filler symbols. Supports changes of length of 128B/130B and 128B/132B coded Skip Ordered Sets for PCIe und USB 3.1.
- For 32 Gb/s setups using the M8061A multiplexer the N4877A-232 CDR and Demultiplexer is required to use the M8020A analysis functions. Please refer to the N4877A data sheet for details on the 32Gb/s input specifications. All parameters of the N4877A can be controlled via the M8070A system software when the "mux and demux" configuration is selected (requires M8070A software revision 1.5.0.0.or later). The CTLE and SER/FER analysis are not available for 32 Gb/s configurations with M8061A and N4877A.
- For 32 Gb/s setups using the M8062A 32 Gb/s front-end the CTLE of the M8041A and M8051A modules are not used. Instead the optional CTLE of the M8062A module can be used. See M8062A data sheet for more information. M8041A option 0S2 SER/FER is not supported when 32 Gb/s BERT configuration is activated.

Software licensing	Offline version does not require a license. For controlling the hardware you can choose between a transportable, perpetual license (M8070A-0TP) and a network, perpetual license (M8070A-0NP) . The network license is only recommended when using multiple M8020A setups within one company. When ordering M8020A-BU1 the M8070A-0TP license will be pre-installed on the embedded controller.
Controller requirements	Embedded PC: Choose M8020A-BU1 for a pre-installed embedded controller M9536A including pre-installation of M8070A software and module licenses. Otherwise: M9536A 1-slot AXIe embedded controller, choose options for Windows 7 or 8, 8 or 16 GB RAM, USB External PC: USB connection recommended between external PC and AXIe chassis. Minimum of 8 GB RAM recommended. For PCIe connectivity please refer to list of tested PCs for AXIe Technical Note, pub no. 5990-7632EN
Operating system	Microsoft Windows 7 (64 bit) SP1, Windows 8 (64 bit), Windows 8.1 (64 bit)
Controller connectivity with AXIe chassis	USB 2.0 (Mini-B) recommended, PCIe 2.0/8x (only for highest data throughput and desktop PC)
Programming language	SCPI. Not compatible with N4900 series and ParBERT 81250A
Remote control interface	Desktop or Laptop PC: LAN M9536A: LAN
Save/Recall	Yes
Export of measurement results	Jitter tolerance results as *.csv file
Display resolution	Minimum requirement 1024 x 768
Scripting interface	The built-in scripting engine is based on IronPython. It enables the control of the device under test as well as other test equipment. Function hooks are available to tailor your measurements, such as read-out of built-in error counters or initializing the device.
DUT control interface	Enables access to built-in error counters and status registers of a device under test (BIST) for use with automated measurements like accumulated BER and jitter tolerance. Can also be used to customize the measurements to DUT specific needs. IronPython scripting and .net libraries are supported to interface with the DUT. Requires option M8070A-1TP or -1NP
Ivi.com driver	Yes
Command expert	Yes
Software pre-requisites	Microsoft Win 7 SP1 or 8 / 8.1, Keysight IO library rev. 16.3
Software download	See www.keysight.com/find/m8070a for latest version

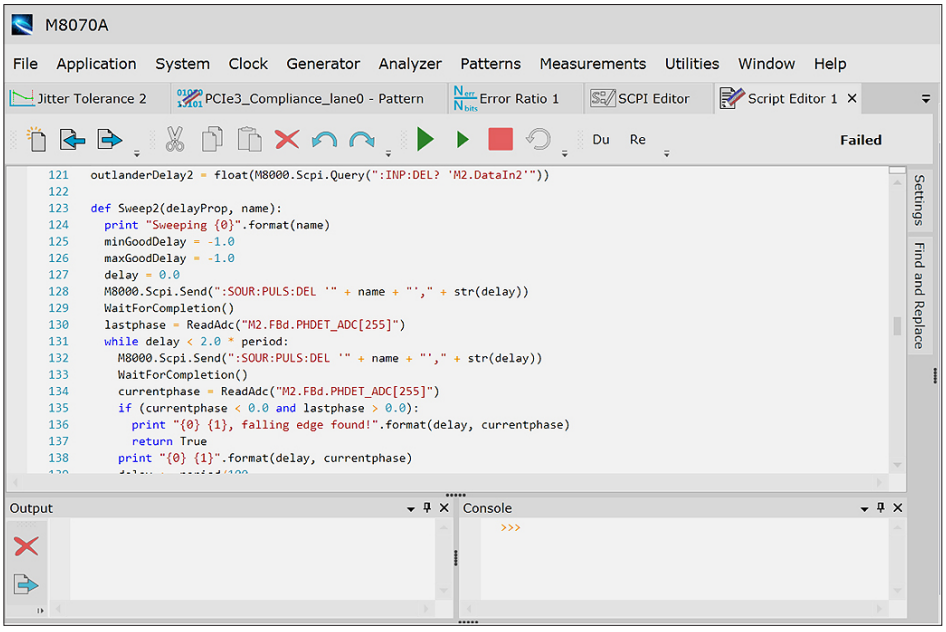

Figure 28. The built-in scripting engine of J-BERT M8020A allows to communicate with the DUT or other instruments. The scripting language is Iron Python.

General characteristics and physical dimensions

Table 25. General characteristics for M8041A and M8051A modules.

	M8041A	M8051A
Operating temperature	5 °C to 40 °C (41 °F to + 104 °F)	
Storage temperature	-40 °C to +70 °C (modules) (-40 °F to + 158 °F)	
Operating humidity	15% to 95% relative humidity at 40°C (non-condensing)	
Storage humidity	24% to 90% relative humidity at 65°C (non-condensing)	
Power requirements (module only)	350 W	250 W
Physical dimensions for modules (W x H x D)	3- slot AXIe module: 351 x 92 x 315 mm (13.8 x 3.6 x 12.4 inch)	2-slot AXIe module: 351 x 61 x 315 mm (13.8 x 2.4 x 12.4 inch)
Physical dimensions for M8020A-BU1/-BU2 (W x H x D)	Installed in 5-slot AXIe chassis: 463 x 194 x 446 mm (18.2 x 7.6 x 17.6 inch)	
Weight net	M8041A module: 6.6 kg (14.6 lb) With M8020A-BU1: 24 kg (53 lb) With M8020A-BU2: 19.9 kg (43.9 lb)	M8051A module: 5.0 kg (11.0 lb) In bundle with M8041A and in a 5-slot chassis: 24.9 kg (54.9 lb)
Weight shipping	With M8020A-BU1: 37 kg (82 lb) With M8020A-BU2: 32.5 kg (71.7 lb)	N/A
Recommended recalibration period	1 year	
Warranty period	3 years return to Keysight	
Warm-up time	30 minutes	
Cooling requirements	Slot airflow direction is from right to left. When operating the M8041A/51A choose a location that provides at least 50 mm of clearance at each side. See also start-up guide for M9505A chassis.	
EMC	IEC 61326-1	
Safety	IEC 61010-1	
Quality management	ISO 9001, 14001	

Specification assumptions

The specifications in this document describe the instruments' warranted performance. Preliminary values are written in italic. Non-warranted values are described as typical. All specifications are valid in the specified operating temperature range after the warm-up time and after auto-adjustment. If not otherwise stated all outputs need to be terminated with 50 Ω to GND. All M8041A and M8051A specifications if not otherwise stated are valid for transition times set to “steep”, and using the recommended cable pair M8041A-801 (2.92 mm, 0.85 m, matched pair).

Ordering instructions

Please refer to the *J-BERT M8020A High-Performance BERT - Configuration Guide* (5991-4032EN) for ordering details.

M8020A-BU2
16 Gb/s High-performance BERT, 1-2 channel
with external PC

M8020A-BU1
with embedded PC

16 Gb/s High-performance BERT, 3-4 channel
(external PC not shown)

32 Gb/s High-performance BERT, 1 channel with M8061A/62A
(external PC not shown). Setup with M8061A requires N4877A as CDR/Demux.

Figure 29. Overview of possible J-BERT M8020A configurations.

Default accessories included with shipment:

M8041A module: eight 50 Ω terminations, commercial calibration report (“UK6”), certificate of calibration, ESD protection kit.
M8051A module: four 50 Ω terminations, clock synchronization cable (M8051A-801), commercial calibration report (“UK6”), certificate of calibration
M8061A module: see M8061A data sheet
M8062A module: see M8062A data sheet
M8020A-BU1: M9505A AXIe chassis with embedded controller, USB cable, getting started guide, AXIe filler panel, power cord
M8020A-BU2: M9505A AXIe chassis, USB cable, getting started guide, AXIe filler panel, power cord
M8070A: CD-ROM with M8070A system software

Recommended accessories:

Cable kit for connecting M8061A with M8020A, 3x 3.5 mm, 0.6 m	M8061A-804
DC block, 26 GHz, 3.5 mm	N9398C
ISI channels, four short traces	M8048A-001
ISI channels, four long traces	M8048A-002
Short matched cable pair, SMA (m) to SMA (m) for cascading M8048A ISI channels	M8048A-801
Four SMA cables, unmatched	15442A
Rack-mount kit for AXIe 5-slot chassis M9505A	Y1226A

Test automation software with support of M8020A

Test automation software for PCIe receiver test	N5990A-101
Test automation software for USB receiver test	N5990A-102
Test automation software for SATA receiver test	N5990A-103

Our deep offering in design, test, and measurement services deploys an industry-leading array of people, processes, and tools. The result? We help you implement new technologies and engineer improved processes that lower costs.

STANDARD 3YR WARRANTY

Three-Year Warranty
www.keysight.com/find/ThreeYearWarranty
Keysight's committed to superior product quality and lower total cost of ownership. Keysight is the only test and measurement company with three-year warranty standard on all instruments, worldwide. And, we provide a one-year warranty on many accessories, calibration devices, systems and custom products.
